

Satellite radio, such as XM Radio, has helped me numerous times while on the road. Their traffic reports and weather reports keep us informed to potential traffic jams or local weather events, which makes our travel safer and more enjoyable. We pay for the service and should be allowed to receive news, music, variety, and anything else without being dictated to by the NAB. I purchased my XM radio to get away from the same old crap that is broadcast on AM or FM stations. If I want to listen to their programming, I have the option of turning off my XM satellite radio, and using the broadcast radio. But that should be MY CHOICE, not the National ASSociation of Broadcasters. Please reject the NAB's petition 04-160 and let XM radio continue to serve it's customers with the best programming choices they can.
